Safe Drive App

Earn DRIVE tokens through
Driving from stretching and that
Correct traffic behavior.
Less consumption, more security
for all road users
More efficiency
Reward for the best 5

Parkstar APP (DRIVE Protokoll)

B2B parking space sale
Large cities, limited parking space
Avoidance of unnecessary search
trips Better air and
ecological balance in the
Cities

DRIVE arcade Game

Earn DRIVE while playing
For everyone who doesn't have a car,
motorcycle or
Have something similar, or simply for
In between as a pastime.
Reward for the 5 best
Advertising space marketing

Charity Program

Support in the field
Mobility. Especially for
People or countries in
Corresponding to them
Need is. increase
productivity, income and
Life quality. Real help

Safe Drive App

Everyone can collect DRIVE tokens with the Safe Drive app.

There are two types of collection options.

1. For a driven distance
2. For a safe route

1> Reward for the distance driven

You download the app to your mobile phone, log in with the data and enter your BSC wallet address. Now activate the function on your mobile phone before you want to cover a distance. As soon as you start moving, the app automatically detects this and records the kilometers / miles you have driven. When you have reached your destination, confirm this and receive the route as a credit on your account. If you exceed a certain amount, you can exchange this for DRIVE token

2> Reward for a safely driven route

Basically the same as in point 1, but with one major difference.

Those who drive safely receive more DRIVE tokens. The main thing here is to adhere to traffic rules and speed limits. In addition, to demonstrate an economical driving style. Don't talk about speeding, driving carefully, and following the flow of traffic. Whoever fulfills these points receives 3 times as many DRIVE tokens as only for driven routes.

The aim is to use this reward system to make road traffic and general mobility safer for all road users and to create a monetary incentive to implement this. You also save scarce raw materials and make your contribution to reducing CO2. In the case of electromobility, too, this can contribute to higher mileage and range and also offer an economic advantage.

In addition, the 5 best wallets are displayed on the homepage every month.

These then receive an additional price in DRIVE token depending on the placement.

Drive Arcade Game

You don't have a car, motorcycle, scooter or anything like that yet ...?

But still want to earn DRIVE token?

Then our Arcade DRIVE Game is just right for you.

Drive through the city and collect DRIVE token in the game. Earn real TOKENS by collecting the coins and exchange your score for coins in your wallet.

To do this, register on our website and enter your details and your BSC wallet address. In addition, the 5 best wallets are displayed on the homepage every month.

These then receive an additional price in DRIVE token depending on the placement.

Charity Aktionen

Drive sets up a Charity wallet for this purpose, which is used exclusively for projects.

Either the network suggests campaigns for this, but applications from people from all over the world are also welcome at any time.

Acquisitions, investments & start-ups can, for example, be considered.

For example: Acquisition of a taxi, important repairs, a bicycle for the long way to school, conversion from a combustion engine to an electric drive, a new truck, acquisition of a navigation device,

Proposals are communicated with the members in appropriate forums and votes take place. This means that every holder, no matter how much DRIVE he holds, can help shape the future.

The aim is to provide more mobility for people who need it and cannot do it on their own. To this end, DRIVE wants to make its global contribution and really reach people and achieve success with small but targeted projects..

Park Star (safe Drive) Protokoll

Individual parking solutions for metropolitan areas and large cities.

B2B parking space offers in real time. Use parking spaces optimally to reduce traffic jams and unnecessarily long search times.

Who doesn't know it... Once again rush hour and you cannot find a parking space in the residential area. Unfortunately, there is far too little public parking space in the major global cities of the world, with individual traffic continuing to grow.

But if you now knew that a parking space near the apartment would be free in 10 minutes and you could coordinate with the current user, then not only time but also CO2 would be saved, as you don't drive unnecessarily around the block around a parking lot to find.

This is where Park Star comes in! A network of users all over the world who connect and pass on your parking spaces directly to the next one.

It's actually very simple ... Let's say you are sitting in a nice restaurant in the city center. You have eaten well and will be leaving in around 15 minutes. They offer the parking lot where you parked your car in the network. As a registered user, all relevant data is already stored. Another networker is happy that he can get a parking space after work at home without much searching. You agree on a small transaction fee and leave the restaurant. The successor is already waiting at the location of your vehicle and you will exchange the parking space in a targeted manner.

This is Parkstar! A new platform for all users of private transport in metropolitan areas and other areas with parking and parking bottlenecks.

You download the Parkstar app on DRIVE token and you can start immediately after entering your data. You can use all valid payments and formats with one another, but of course you can also pay with DRIVE token.

Another major advantage for everyone is that you get DRIVE tokens for every car park you have arranged. The provider and the new user each receive the same amount in tokens after the transfer has been confirmed in the app. You can thus collect tokens but also exchange them with each other and use them as a means of payment at the same time.

An advantage for each individual but also the city administrations and road networks within the big cities. For less unnecessary fuel consumption and more time for the important topics in your free time.

White Paper DRIVE token

Drive Token Whitepaper

1. What is drive token?

DRIVE is based on the BNB platform and is a so-called BSC token. The maximum availability is:
210.000.000.000 DRIVE

A new crypto currency based on BNB smart chain. 4% of each transaction is always distributed to all holders as a reward. Thus, the personal wealth increases automatically with every purchase or sale. In addition, 4% is donated to the network. This uses the existing capital to finance advertising measures, network expansions and capital increases for the token. Drive is dedicated to the entire spectrum of topics of individual transport and has set itself the task of maintaining and continuously improving the driving pleasure and mobility of every individual around the world. DRIVE is enthusiastic about all forms of automotive traffic.

The following criteria are important:

Automatic liquidity pool (LP) Automatic LP is DRIVE's core competence. Here we have a feature that acts as a twofold beneficial implementation for owners.

4% for every transaction for all holders 4% for the liquidity of the DRIVE token

First, the contract soaks up tokens from sellers and buyers alike and adds them to the LP, creating a solid price floor.

The increasing liquidity ultimately serves all holders, network members and the token itself. This process is important to ensure stability in addition to pure speculation on the stock exchanges and to give all users the same opportunities.

All of this is an effort to alleviate some of the troubles we have seen with the current DeFi reflection tokens. We are confident that this model and protocol will prevail over the outdated reflection tokens for these reasons

The long-term commitment of all holders and users is guaranteed by the permanently implemented LP process. A pure "burn" process is not up-to-date and also not transparent. Our process not only creates trust but also a long-term establishment.

We will implement this process of the (LP) accordingly in real time on our homepage and make it accessible to everyone at any time with data.

Manual Burns

Sometimes burns matter; sometimes they don't. A continuous burn on any one protocol can be nice in the early days, however, this means the burn cannot be finite or controlled in any way. Having burns controlled by the team and promoted based on achievements helps to keep the community rewarded and informed. The conditions of the manual burn and the amounts can be advertised and tracked.

DRIVE aims to implement a burn strategy that is beneficial and rewarding for those engaged for the long term. Furthermore, the total number of DRIVE burned is featured on our readout located on the website which allows for further transparency in identifying the current circulating supply at any given point of time.

1. What is the DRIVE Network?

Drive UG acquires partners around the world for everything to do with automobiles and traffic in order to be able to offer its users added value. This can mean individual parking solutions, workshops, car rental, tuning and much more. The aim is to be able to pay directly with the token in the partner network or to enjoy benefits. In addition, the network endeavors to generate additional users and to finance competitions. Airdrops, stock market listings, competitions and other marketing measures.

The community is involved here. Proposals are communicated with the members in appropriate forums and appropriate votes take place. This means that every holder, no matter how much DRIVE he holds, can help shape the future.

2. What is the objective of DRIVE and the network?

It should be possible to process payments within the network using the DRIVE token. This has several advantages for the network members but also for the pure holder of the token. Payments can be processed quickly and easily anywhere in the world.

Due to the payment process and the acceptance of the members, the payment method also gains a growing reputation. Thus, in addition to pure speculation, a payment flow is guaranteed, which supports growth in addition to stock exchange trading.

In addition, it is important to the network and the founders to guarantee the mobility of their members in the long term. For this purpose, a charity fund will be set up after the first IPO, which is to provide individual support for the Holder worldwide.

For distribution, votes are held in the respective social forums within the members to ensure added value in addition to the pure holding of the token. For this purpose, in addition to pure network membership, incentives are created in order to be able to offer individual added value to users. Discounts, bonus programs, easier access to information and growing within network operators. In addition to the great challenge of the expected change in mobility worldwide from fossil fuels to CO₂-neutral drive solutions, DRIVE should make a long-term contribution.

Here solutions from partners are already available. This network should grow in the short, medium and long term and be based on the economic principle of decentralized payment options.

The concept focuses on the dream of absolute individual mobility and holistic global mapping. There is a large global gap in the area of individual possibilities. Here DRIVE can make a contribution to compensate for this imbalance and to create personal and cross-border opportunities.
